

Software Services Fact Sheet

QFund's strong Product Development practice ensures exemplary documentation and packaging of software solutions, which are on par with the world standards and acknowledged by global clientele. We manage turnkey projects, and have built, managed and supported our customers' IT systems across the value chain — infrastructure, applications and business processes. That is because our capabilities span the entire IT spectrum, IT architecture, hardware, software, network consulting and IT-enabled processing services.

Application Development - QFund has a well-defined and mature application development process comprising of the complete software development life-cycle (SDLC) from business requirements analysis, application definition, application design, to testing, implementation and warranty support of the application.

- Custom Application Development
- Web Application Development
- Distributed Application Development

Packaged Product Services - QFund's packaged product services portfolio includes the entire gamut of services right from package evaluation, selection, implementation, post-implementation support and development, version upgrades and Master Data Management services. Our proven methodologies and domain expertise reduce the Total Cost of Ownership of the package for your enterprise.

- SAP
- Oracle EBS
- JD Edwards

Enterprise Application Integration - QFund's Enterprise Integration practice provides a structured information processing and delivery framework that has helped leading global organizations break down information barriers across the enterprise. Our comprehensive suite of Enterprise Integration services

delivers an end-to-end solution that addresses the four critical elements of business operations: business, people, process and IT.

- Enterprise application integration (intra-enterprise)
- B2B and B2C integration
- Legacy integration

IV&V Services - Independent Verification & Validation is one of the core services of QFund. We can provide IV&V support during a System's Development Life Cycle (SDLC). IV&V practice at QFund aims to provide cost-effective, end-to-end, independent, high quality, quick turnaround testing solutions to our customers by utilizing testing best practices and by leveraging the offshore-onsite global delivery model.

- Building and managing Testing Teams
- Strategic partnerships with Tool Vendors
- Expertise in design and implementation of Test Automation Frameworks
- Expertise in defining Test Strategy for various projects across domains
- Expertise in Automation testing tools

Business Intelligence & DW - QFund attributes the success to its unique methodology of a three-path approach by addressing business, data, and technical needs individually and interdependently for providing Business Intelligence and Data warehousing services. QFund has established a Data Warehousing Practice, with an experienced team in wide variety of tools and defined ISO-9001 compliant processes that enable our clients to derive maximum benefits from their Data Warehousing initiatives.

- Database management and performance tuning
- Data modeling; data extraction, transformation and loading
- Data Merging, Migration and implementation
- ETL (Extraction, Transformation and Load) and DTS (Data Transformation Services)

Maintenance & Support Services - The Maintenance & Support arm of QFund provides customers with 24x7 offshore production support & maintenance services for their applications. QFund proposes a Value Cube of QFund's Production Support & Maintenance Services whereby, QFund addresses all the needs on the Technology/Monitoring & Support/Change Management Dimensions of the clients applications. These services for clients are provided with contractual guarantees encompassing stringent Service Level Agreements, Corporate Guarantees and Liquidated Damages on failure to adhere to the contractual guarantees.
